SecureSheet

Your Compensation Spreadsheet.
Multiple Users.

MERIT COMPENSATION | BONUS | INCENTIVE
PERFORMANCE | MAPPING | STATEMENTS

SecureSheet in Action

Simply share one Compensation spreadsheet with your entire team, and control which users get to see which data. It's all done securely online – so everyone's working with the latest version, and in real time. You can end your organization's spreadsheet nightmares overnight!

Simple. Fast. Secure. Effective.

YOUR RESULTS

Speed. Usability. Control.

✓ Your entire process managed from beginning to end using one single, centralized, shared SecureSheet.

✓ All budgets, business controls, audit trails and security are enforced in the SecureSheet.

✓ Data collection takes minutes. Entire process takes days instead of weeks.

✓ All access through a secured website, available anywhere users have access to a web browser.

✓ All updates are real-time; everyone works with latest version. Feedback immediately available to management.

✓ SecureSheet's phenomenal usability and depth of functionality means our success rate is high. Our web tool seldom fails to meet enterprise needs.

SecureSheet

The Leader in Multi-User HR Spreadsheets

Are you currently using spreadsheets for your Merit, Goal, Performance, or Compensation processes? If you are, SecureSheet is the perfect solution for you.

SecureSheet is a powerful web-based HR spreadsheet solution that eliminates emailing different versions of the same spreadsheet to different users and then having to manually re-aggregate them.

You share a single "master" spreadsheet among many users, and you decide which portion each person can see or edit. It's all done securely online—so everyone's working on the latest version, in real time.

It's as simple as 1-2-3

Step 1: **Upload your spreadsheet**

Step 2: **Customize your SecureSheet**

Step 3: **Share your SecureSheet**

As an example of incredible benefits, look at how SecureSheet streamlined a 1,000-user, annual Employee Performance & Merit process

The OLD Process	The NEW Process
Multiple spreadsheets were manually created and emailed to end users	One single, shared spreadsheet is created from the SAP data—and no more emailing
Some unauthorized associates had access to sensitive data	Associates view and edit only parts of the sheet that are appropriate for them
There were no effective controls to enforce data integrity	All budgets, business controls, and security are enforced in the SecureSheet
There was no mechanism to monitor the status or progress of the data collection	All activity is in real-time
Each spreadsheet was manually reviewed and sent back for revisions	All updates and reviews are real-time in one centralized and controlled place
Spreadsheets were manually aggregated to calculate totals	Totals are automatically aggregated
The process spanned several weeks/months	Data collection takes minutes, the process is reduced to days
Not SOX compliant	SOX compliant
